PROFESSIONAL PROFILE

Full Stack and Mobile Developer with 8 years of experience across production web products, mobile applications, APIs and business systems. Specialized in mobile engineering, primarily React Native/Expo, with advanced Full Stack work in React/Next.js, TypeScript/Node.js and PHP/Laravel. End-to-end experience across application architecture, data, integrations, performance, CI/CD and production operations, including offline-first systems, multitenancy/white-label, queues/cache, reliability, security, Android/iOS publishing and production support. Recent experience in technical leadership and product ownership while remaining hands-on and working directly with Product, QA, support, sales, customers and partners.

TECHNICAL EXPERTISE

Core expertise: Mobile Engineering (React Native/Expo); React, Next.js, TypeScript/JavaScript; Node.js/NestJS; PHP/Laravel/Blade/Livewire; SQL; REST APIs/WebSockets and integrations.

End-to-end mobile: iOS/Android architecture, offline-first and synchronization, push/deep links, white-label, builds/signing, App Store/Google Play, IAP, privacy/data-protection requirements and production maintenance.

Data and backend: PostgreSQL, SQL Server, MySQL/MariaDB, Oracle, MongoDB, Redis and Firebase; modeling, stored procedures/triggers, aggregations, query tuning, caching, queues and asynchronous processing.

Infrastructure, quality and reliability: Docker, AWS/Azure/VPS, GitHub Actions/Jenkins/GitLab CI, RabbitMQ/Kafka/SQS, load balancing/CDN, automated and load testing, observability, backups, rollback/recovery, security and failure response.

Advanced experience: C#/.NET Framework, .NET Core, ASP.NET; Java/Spring Boot; Flutter/Dart; Vue.js/Angular; Python/FastAPI, automation and data. Additional experience: Swift/Objective-C, Kubernetes, C#/Unity and LLM/OpenAI integrations.

PROFESSIONAL EXPERIENCE

TECH LEAD | SENSORAMA PLAY — 2025 - Present

Stack: React, React Native/Expo, Next.js/Node.js, PHP/Laravel, Blade/Livewire, TypeScript/JavaScript, SQL/Redis, Docker, Azure, C#/Unity, Jest/Playwright, LLM/OpenAI

- Technical leadership for a 6-person team, with ownership of Letrinha Livros, Além das Diferenças and Sensorama Play web/apps; hands-on work across web, mobile, APIs, data and architecture, plus support for the 3D product.
- Evolved a 3D-integrated admin panel into a white-label, multitenant education platform shared by three products and four application/profile variants, including an EPUB library, reading fluency, gamification and administrative modules.
- Developed React/React Native applications and PHP/Laravel/Node services with SQL/Redis; built web/mobile accessibility features and used LLMs/OpenAI for educational content and assessments.
- Established GitHub Pull Requests and code review, mentoring practices and a Jest/Playwright quality strategy in CI, including pre-merge gates and regression prevention across products sharing the same codebase.
- Worked on Docker, cache/queues, dashboard data, load testing, availability, load balancing, backup/recovery and releases; supported POCs/public-sector bids and owned the mobile publishing/maintenance lifecycle.
- Migrated VPS/Hostinger infrastructure to DigitalOcean, externalized assets to Spaces and reduced a 40+ GB project base to operational images/builds below ~4 GB; used Grafana and load testing for scale scenarios.

MID-LEVEL FULL STACK & MOBILE DEVELOPER | AMPLIMED — 2024 - 2025

Stack: React, React Native, TypeScript/JavaScript, Node.js, PHP/Laravel/Blade, Java/Swift, Twilio, MongoDB, Docker/Dev Containers, Kubernetes, Jest, REST APIs

- Technical reference for marketplace, online scheduling, white-label applications and queue-based telemedicine within a 4-person team, working across frontend, backend, mobile and operations.
- Developed and refactored React interfaces integrated with PHP/Laravel/Blade and Node.js; maintained legacy PHP/JavaScript, and built microservices, REST integrations and Jest unit tests.
- Developed and maintained React Native apps, using Java/Swift for native requirements, covering builds, distribution and Google Play/App Store publishing, including white-label products.
- Worked on telemedicine with Twilio and patient queues - priority, triage, reassignment and continuity of care - integrated with the clinical system; Docker/Dev Containers and Kubernetes support.
- Worked with MongoDB/aggregations and dashboard data; resolved Google Play privacy/data-protection issues and standardized mobile delivery, reducing recurring Jira-to-store cycles from ~30 days to about one week.
- Impact: white-label foundation adopted by dozens of customers and six-month commercial targets reached in approximately one quarter, with gains in performance, scalability and maintainability.

TECH LEAD | ASTRONFY — 2023 - 2024

Stack: PHP/Laravel, Blade/Livewire, Angular, Node.js/Next.js, TypeScript/JavaScript, Python, MariaDB, AWS/Azure, VPS, GitHub, payment integrations

- Technical leadership for a 5-person team, responsible for marketplace, accounting dashboard, payment/checkout integrations, support tools and web/mobile applications in a modular white-label architecture.
- Hands-on development with PHP/Laravel/Blade/Livewire, Angular and Node.js/Next.js across frontend, backend, integrations and performance; Python automation for data processing, scraping and operations.
- Managed servers/VPS, GitHub-triggered deployments, backups, security and availability across AWS/Azure; handled data migration/implementation, customer technical onboarding and support for international partners.
- Integrated domestic, international and cryptocurrency payments; used AWS Lambda, SQS/SNS, Firebase/analytics and cron jobs according to product workflows.
- Impact: marketplace operating in 10+ countries and processing thousands of monthly transactions; the white-label pipeline reduced technical onboarding of new customers to about 3 days.

FULL STACK & MOBILE DEVELOPER | INFOGEN SISTEMAS 2022 - 2023

Stack: GeneXus 9/10, C#/.NET Framework, .NET Core, ASP.NET, Vue.js, Java/Android, Flutter, React Native/Expo, Python, SQL Server/MySQL/Oracle, Firebase, IIS, Jenkins

- Progressed from Trainee to Junior and Mid-level Developer across ERP, portal, API and mobile products; started with GeneXus 9/10 and large SQL Server databases, including stored procedures, triggers and customer data migration/implementation.
- Expanded into portals, web apps, APIs and services with C#/.NET Framework, .NET Core and ASP.NET, plus Vue.js, integrations, legacy systems and IIS/Jenkins deployment/support processes.
- Worked across three mobile generations - Java/Android, Flutter and React Native/Expo - with Firebase, reports, push notifications and the full testing, publishing and app-store management lifecycle.
- Implemented automatic offline synchronization for CRM, sales orders, WMS and milk-collection apps, with connectivity detection, recovery after failures, duplicate prevention and data-integrity safeguards.
- Consolidated mobile development around React Native/Expo with Redux, TypeORM/SQLite, migrations and white-label architecture; managed client apps, build optimization, ASO, store requirements and data-protection practices.
- Impact: worked across 20+ apps, refactored 8+ and created 15+ white-label modules, alongside Python automation, documentation and mentoring. The new foundation accelerated delivery and eliminated updates that had previously required app reinstallation.

FULL STACK & MOBILE DEVELOPER | FREELANCE & INDEPENDENT PROJECTS 2018 - Present | project-based

Stack: React/Next.js, React Native, Node.js, Vue/Angular, C#/.NET, PHP/Laravel, Java/Spring Boot, Flutter, Swift/Objective-C, Python, SQL/NoSQL, Firebase, Docker, VPS

- Development and consulting from chats, intranets and automation to websites, marketplaces, dashboards, APIs, apps and 2D/3D experiences, covering discovery, architecture, implementation, publishing and evolution.
- End-to-end work with SQL/NoSQL, payments, Vercel/Neon, Firebase, Docker, VPS and selected AWS services, choosing the stack according to product context and constraints.
- APIs and services in Node.js/NestJS, Laravel, C#/.NET, Spring Boot and Python/FastAPI, with Redis, payments, notifications, WebSockets and external integrations; CI/CD, cron jobs, observability and backups.
- Recent projects include a production property-inspection app, an international sports-training app with IAP and a platform for contextualizing news/public data; customers in 4+ countries and a product showcased at a trade fair in Germany.
- Independent work consolidated the full product cycle: understanding customers and markets, turning problems into viable solutions, estimating cost/risk, building, publishing, supporting and evolving products after real-world use.

EDUCATION AND QUALIFICATIONS

Academic education

Bachelor's Degree in Information Systems - Cruzeiro do Sul Virtual | In progress | expected graduation: 2027

Languages

Portuguese native | English advanced / professional working proficiency - CCAA, 450 in-person hours (2015-2019).

Additional training and credentials

AWS Training & Certification (2026): AWS Knowledge: Compute; AWS Knowledge: Networking Core; AWS Well-Architected Foundations; AWS Well-Architected Proficient (AWS/Credly badge).

Database Engineering Fundamentals; Machine Learning A-Z - ML, DL and AI with AWS, Python and R.
