PROFESSIONAL SUMMARY

Full Stack and Mobile Software Engineer with 8 years of experience since 2018 across production web/mobile products, APIs, enterprise systems, and independent projects. Specialized in React Native/Expo, with React, TypeScript, Node.js, Laravel, C#/.NET, and cloud expertise. Hands-on in architecture, integrations, and maintenance of offline-first, white-label, and multitenant solutions.
Served as Tech Lead and technical reference, leading teams of up to six professionals while remaining hands-on in development, code reviews, mentoring, and delivery planning.

TECHNICAL SKILLS

Mobile: React Native, Expo, TypeScript, Flutter/Dart, Android/Java, native iOS/Swift integrations, SQLite, TypeORM, offline-first synchronization, push notifications, deep linking, Google Play, and App Store.
Web & Backend: React, Next.js, Node.js/NestJS, PHP/Laravel, C#/.NET, REST APIs/WebSockets, authentication, multitenancy, microservices, queues/messaging (AWS SQS), and integrations.
Data & Infrastructure: PostgreSQL, SQL Server, MySQL, MongoDB, Redis, Firebase, AWS, Azure, DigitalOcean, Docker, CI/CD, GitHub Actions, and GitLab CI.
Engineering: Software architecture, Jest, Playwright, load testing, observability/Grafana, code reviews, Scrum/Kanban, mentoring, and technical documentation.

WORK EXPERIENCE

Sensorama Play

Tech Lead | Jan 2025 – Present

- Architected and rebuilt the Laravel/MySQL platform with authentication, authorization, roles, permissions, and institution-specific rules. Stabilized integration with the existing Unity 3D product and consolidated Sensorama Play, Letrinha Livros, and Além das Diferenças into a reusable white-label, multitenant architecture.
- Developed four web variants and a shared React Native/Expo foundation for students, teachers, and administrators. Managed developer accounts, builds, submissions, testing/review, publishing, and updates of released versions on Google Play and the App Store.
- Built an EPUB library with controlled offline access, Phaser 2D games, reading-fluency assessments, gamification, dashboards, reports, and accessibility tools; integrated local LLMs and OpenAI for learning sequences, questions, translation, and speech/image analysis.
- Led a six-person team, organizing sprints, pull requests, code reviews, and Jest/Playwright tests in CI. Stayed hands-on and coordinated web, mobile, and backend integrations across three products through demonstrations, validation, and commercial preparation.
- Modernized Laravel/Horizon/Redis queues and Docker/DigitalOcean infrastructure with external asset storage. The previous operational footprint exceeded 40 GB; after separating assets, deployable images were below 4 GB. Evaluated scalability using Grafana and load tests with simulated data.
- Contributed to four public-procurement POCs approved in technical evaluations; legal and commercial decisions remained outside engineering.

Amplimed

Full Stack & Mobile Developer | Mar 2024 – Jan 2025

- As technical reference on a four-person team, helped modernize marketplace and scheduling components: React interfaces, Node.js/NestJS and Laravel APIs, operational workflows, dashboards, MySQL, Prisma, and MongoDB aggregation pipelines.
- Developed patient queue, triage, prioritization, and assignment workflows, integrating Twilio video calls and communication services with clinical management.
- Developed and refactored in-house and white-label React Native apps for scheduling and telemedicine, including native Java/Swift video-call adjustments; managed developer accounts, publishing, compliance, and Android/iOS updates.
- Standardized mobile builds, validation, documentation, and publishing, cutting recurring release cycles from roughly 30 days to one week and resolving privacy and app-store policy issues affecting Android distribution.
- Contributed to a white-label architecture adopted by dozens of customers, accelerating branded solutions. According to internal commercial feedback at the time, the scheduling and queue-management solution reached in roughly one quarter a revenue benchmark comparable to six months of an established product.

Astronfy

Tech Lead | Nov 2023 – Mar 2024

- Led five developers, allocating responsibilities by strengths and priorities to deliver for multiple customers while continuing hands-on development.
- Developed marketplaces, dashboards, checkouts, and white-label services with Laravel/Livewire, React, Next.js, Node.js/TypeScript, and MariaDB; integrated domestic/international payments, financial workflows, and cryptocurrency-related features.
- Built Python automations, integrations, and asynchronous jobs with AWS Lambda/SQS/SNS and Firebase; maintained VPS/cloud infrastructure, GitHub Actions deployments, backups, and production operations.
- Served as a technical contact for customers in Brazil, Portugal, Mexico, Germany, the US, Paraguay, and Curaçao, leading discussions in English. Standardized white-label configurations and deployments, enabling technical onboarding of web customers in roughly three days.

Infogen Sistemas

Full Stack & Mobile Developer | Mar 2022 – Nov 2023

Intern → Trainee → Junior → Mid-Level Developer

- Progressed from intern to mid-level developer and mobile technical reference, independently building 20+ white-label apps within an ecosystem of 40+ agricultural apps while maintaining other products and ERP modules.
- Helped consolidate legacy Java, Flutter, and Xamarin apps into a React Native/Expo foundation with Redux, SQLite, and TypeORM; cut recurring development and publishing cycles from about 20 days to one week.
- Refactored agricultural CRM, milk collection, sales ordering, and WMS with local persistence, offline-first synchronization, failure recovery, duplicate prevention, background location tracking, and data integrity in low-connectivity areas.
- Improved builds and updates on Google Play/App Store, eliminating previously required reinstalls while improving store compliance and App Store Optimization (ASO).
- Built ERP APIs and modules in C#/.NET/ASP.NET using SQL Server, Oracle, MySQL, stored procedures, triggers, and query optimization; helped modernize 8+ apps and create 15+ reusable white-label portal modules.

Freelance & Independent Projects

Full Stack & Mobile Developer | 2018 – Present

- Built 30+ small-scale white-label mobile apps, marketplaces, checkouts, intranets, and automations; served clients in more than four countries from requirements through deployment and support.
- Built XtremeFut, an international sports-training app developed with Ferrão and professional futsal trainers, including mobile features and in-app purchases; personally presented it at the HIT Games Conference in Berlin in 2024.
- Architected SettaSynk, a property-inspection platform with offline-first React Native/Expo app and Laravel backend: temporary local persistence until inspection records and photo/video evidence synchronize, reports, and self-hosted AI services. In beta testing with inspection and real estate companies in Rio Grande do Sul, Brazil, ahead of commercial launch.
- Built Aletheia, a platform contextualizing news and public information, plus web/mobile accessibility plugins and SDKs offering TTS, color filters, adjustable fonts, and reduced motion, including for neurodivergent users.

EDUCATION

Bachelor's Degree in Information Systems — Cruzeiro do Sul Virtual | In progress; expected graduation: Nov 2027.

LANGUAGES & TRAINING

Portuguese: Native | English: Advanced/professional proficiency; CCAA, 450 hours of in-person instruction (2015–2019), with experience in international technical communication.
AWS badges and training (2026): Knowledge Compute; Knowledge Networking Core; Well-Architected Foundations; Well-Architected Proficient (Credly). Additional training in Database Engineering and Machine Learning.
