PROFESSIONAL SUMMARY

Full Stack and Mobile Software Engineer with 8 years of software development experience since 2018, beginning with independent projects and later working on production web and mobile products, APIs, and enterprise systems. Specialized in React Native/Expo, with extensive experience in React, TypeScript, Node.js, Laravel, C#/.NET, databases, and cloud infrastructure. End-to-end involvement in architecture, development, integrations, releases, and maintenance, including offline-first, white-label, and multitenant solutions.

Approximately 4 years in technical leadership or technical-reference roles, including formal Tech Lead positions, while remaining hands-on. Experience with architectural decisions, code reviews, mentoring, delivery planning, and solving complex problems, with a focus on quality, operational efficiency, and business outcomes.

TECHNICAL SKILLS

Mobile: React Native, Expo, TypeScript, Flutter/Dart, Android/Java, native iOS/Swift integrations, SQLite, TypeORM, offline-first synchronization, push notifications, deep linking, Google Play, and App Store.

Web & Backend: React, Next.js, Node.js/NestJS, PHP/Laravel, C#/.NET, REST APIs/WebSockets, authentication, multitenancy, microservices, queues/messaging (AWS SQS), and integrations.

Data & Infrastructure: PostgreSQL, SQL Server, MySQL, MongoDB, Redis, Firebase, AWS, Azure, DigitalOcean, Docker, CI/CD, GitHub Actions, and GitLab CI.

Engineering: Software architecture, Jest, Playwright, load testing, observability/Grafana, code reviews, Scrum/Kanban, mentoring, and technical documentation.

WORK EXPERIENCE

SENSORAMA PLAY

Tech Lead | 2025 – Present

- Architected and rebuilt the core platform with Laravel/MySQL, defining authentication, authorization, roles, permissions, and institution-specific business rules. Stabilized integrations with the Unity 3D product and consolidated Sensorama Play, Letrinha Livros, and Além das Diferenças into a white-label, multitenant architecture, centralizing institutional rules and reusing functionality across products.
- Developed four web variants and a shared React Native/Expo mobile foundation for products and user roles including students, teachers, and administrators. Managed developer accounts, builds, submissions, app review/testing, and maintenance on Google Play and the App Store, including publishing and updating released versions.
- Implemented an EPUB library with controlled offline access, Phaser 2D games, reading-fluency assessment, gamification, dashboards, management reports, and accessibility features, plus local LLM and OpenAI integrations for generating questions and learning sequences, translation, and speech and image analysis.
- Provided hands-on technical leadership to a six-person team, organizing sprints and responsibilities, guiding implementations, and establishing pull requests, code reviews, and automated Jest/Playwright tests in CI while continuing to develop software directly.
- Coordinated technical integration across web, mobile, and backend for the three products, aligning business rules, shared features, and delivery through demonstration, validation, and commercial-preparation stages.
- Reworked Laravel/Horizon/Redis queues and asynchronous jobs and modernized infrastructure with Docker, DigitalOcean, and external asset storage. Separated assets from application images: the previous operational footprint exceeded 40 GB, while deployable images/builds became smaller than 4 GB. Used Grafana and simulated load tests to evaluate scalability.
- Contributed to four POCs for public procurement processes, all approved in technical evaluations; legal and commercial decisions followed processes outside engineering.

AMPLIMED

Full Stack & Mobile Developer | 2024 – 2025

- As a technical reference on a four-person team, contributed to modernizing the marketplace and scheduling platform by developing and refactoring React interfaces, Node.js/NestJS and Laravel APIs and services, and operational workflows and dashboards using MySQL, Prisma, and MongoDB aggregation pipelines.
- Developed queue-based patient-care workflows for triage, prioritization, assignment, and reassignment, integrating Twilio video calls and communication services with the clinical management system.
- Developed and refactored in-house and white-label React Native applications, integrating scheduling and telemedicine workflows with platform APIs and making native Java/Swift adjustments for video calls. Also managed developer accounts, publishing, policy compliance, and updates on Google Play and the App Store.
- Standardized mobile builds, validation, documentation, and publishing, reducing recurring delivery cycles from approximately 30 days to one week while resolving app-store privacy and policy requirements.

- Contributed to a reusable white-label architecture for scheduling and healthcare, adopted by dozens of customers and used to accelerate delivery of branded applications and solutions.
- According to internal commercial feedback at the time, the white-label scheduling and queue-management solution reached, in roughly one quarter, a revenue benchmark comparable to six months of an established product.

ASTRONFY

Tech Lead | 2023 – 2024

- Led a team of five developers, assigning work according to individual strengths, setting priorities, and supporting technical decisions to deliver multiple customer products concurrently while continuing to code.
- Developed marketplaces, dashboards, administrative tools, checkouts, and white-label services with Laravel/Livewire, React, Next.js, Node.js/TypeScript, and MariaDB; integrated domestic/international payments, financial workflows, and cryptocurrency-related features.
- Implemented Python automations, integrations, and asynchronous processing with AWS Lambda/SQS/SNS and Firebase; maintained VPS/cloud infrastructure, GitHub Actions deployments, backups, and production operations.
- Acted as a technical point of contact for customers in Brazil and abroad (Portugal, Mexico, Germany, the United States, Paraguay, and Curaçao), leading technical discussions in English and coordinating delivery. Standardized white-label configurations and deployment, enabling technical onboarding of web customers in approximately three days.

INFOGEN SISTEMAS

Full Stack & Mobile Developer | 2022 – 2023

Intern → Trainee → Junior → Mid-Level Developer

- Progressed from intern to mid-level developer, becoming a technical reference on the mobile team. Independently developed more than 20 white-label applications in an ecosystem of over 40 agricultural-producer applications, while helping maintain other products and ERP modules.
- Helped consolidate legacy Java, Flutter, and Xamarin applications into a reusable React Native/Expo foundation with Redux, SQLite, and TypeORM. Reduced recurring development and publishing cycles for new applications from approximately 20 days to one week.
- Refactored agricultural CRM, milk collection, sales ordering, WMS, and other solutions, implementing local persistence, offline-first synchronization, failure recovery, duplicate prevention, background location tracking, and data integrity for low-connectivity areas.
- Optimized builds, versioning, publishing, and updates on Google Play/App Store, eliminating procedures that required users to reinstall applications while improving store compliance and App Store Optimization (ASO).
- Developed ERP APIs, modules, and integrations with C#/.NET and ASP.NET, using SQL Server, Oracle, MySQL, stored procedures, triggers, and query optimization. Helped modernize more than eight applications and develop over 15 reusable white-label portal modules.

FREELANCE & INDEPENDENT PROJECTS

Full Stack & Mobile Developer | 2018 – Present

- Developed more than 30 small-scale white-label mobile applications, as well as marketplaces, integrated checkouts, intranets, administrative tools, and automations. Served clients in more than four countries across requirements, architecture, implementation, deployment, and support.
- Developed XtremeFut, an international sports-training application created in collaboration with professional futsal representatives (with Ferrão and professional sports trainers involved), including mobile features and in-app purchases. Personally presented the project at the HIT Games Conference in Berlin in 2024.
- Architected SettaSynk, a property-inspection system with an offline-first React Native/Expo application and Laravel backend: inspection records, photo/video evidence, local storage until synchronization, report generation and sharing, and integration with self-hosted AI services. Product in testing and commercial preparation. Inspection companies and real estate agencies in Rio Grande do Sul, Brazil, are participating in beta testing. Also developed Aletheia, a platform for contextualizing news and public information, along with accessibility plugins and SDKs for web and mobile, offering TTS, color filters, adjustable fonts, and reduced motion for different needs, including neurodivergent users.

EDUCATION

Bachelor's Degree in Information Systems — Cruzeiro do Sul Virtual | In progress; expected graduation: Nov 2027.

LANGUAGES & TRAINING

Portuguese: Native | English: Advanced/professional proficiency; CCAA, 450 hours of in-person instruction (2015–2019), with experience in international technical communication.

AWS badges and training (2026): Knowledge Compute; Knowledge Networking Core; Well-Architected Foundations; Well-Architected Proficient (Credly). Additional training in Database Engineering and Machine Learning.
