PROFESSIONAL SUMMARY

Full Stack and Mobile Developer with 8+ years of professional experience building, evolving and supporting web products, mobile applications, APIs and business systems. Hands-on across frontend, backend, mobile, databases and infrastructure, with recurring experience in React, React Native, TypeScript/JavaScript, Node.js, C#/.NET, PHP/Laravel, Java, Python and relational and NoSQL databases.

Experience taking products from inception to production as well as working with large legacy systems: application architecture, data modeling and optimization, integrations, messaging, offline synchronization, performance, testing, CI/CD, Android/iOS publishing and production operations. I move across stacks according to product needs and can independently understand existing codebases, diagnose bottlenecks and adopt new technologies without relying on a single tool.

Technical leadership emerged naturally from experience and the trust earned across projects: code review, mentoring, technical decisions and collaboration with product teams, customers and partners, while remaining directly involved in development. AI and machine learning are complementary parts of my toolkit, while my core expertise remains Full Stack and Mobile development.

TECHNICAL SKILLS

Web & frontend: React, Next.js, Vue.js, Angular, TypeScript, JavaScript, HTML/CSS, Tailwind, Blade and Livewire; component-based development, responsive interfaces, performance and API integration.

Mobile: React Native/Expo, Flutter, Java/Android, Swift and Objective-C; online/offline apps, synchronization, push notifications, deep links, publishing and maintenance on Google Play and the App Store.

Backend & APIs: Node.js/NestJS, C#/.NET Framework 4.x and .NET Core, ASP.NET, PHP/Laravel, Java/Spring Boot, Python/FastAPI, REST APIs, WebSockets, integrations and asynchronous services.

Data & messaging: SQL Server, PostgreSQL, MySQL/MariaDB, Oracle, MongoDB, Redis and Firebase; stored procedures, triggers, data modeling, aggregations, query optimization, RabbitMQ, Kafka, Laravel Horizon and AWS SQS.

Infrastructure & quality: Docker, IIS, VPS, Vercel/Neon, AWS, Azure, Git/GitHub/Git LFS, Jenkins, GitHub Actions and GitLab CI; Jest, Playwright, Selenium, load testing, CI/CD, load balancing, CDN, backups and observability.

Engineering & applied AI: software architecture, distributed systems, multitenancy/white-label, data availability, integrity and latency, legacy modernization, local LLMs, OpenAI integrations, data analysis and machine learning.

PROFESSIONAL EXPERIENCE

TECH LEAD | SENSORAMA PLAY | 2025 - Present

Stack: React, React Native, Next.js/Node.js, PHP/Laravel, Blade/Livewire, C#/Unity, TypeScript/JavaScript, SQL/Redis, Docker, Azure, Jest/Playwright and LLM/OpenAI integrations.

- Hands-on development and technical leadership across web, mobile, backend/APIs and C#/Unity products using React/React Native, PHP/Laravel and Blade/Livewire; worked on refactoring, performance, legacy maintenance and continuous product evolution.
- Evolved an admin platform initially integrated with a 3D product into a white-label, multitenant educational platform supporting three products on a shared foundation and four application/profile variants - student, teacher, management and a white-label version - with full lesson sequences, video classes, reading fluency, an EPUB digital library and gamification.
- Built a custom accessibility module for web and mobile, including support for low vision and reading difficulties, TTS/read-aloud, font adjustments, color/contrast modes and VLibras integration.
- Applied AI as a complementary product capability using local LLMs and OpenAI to generate lesson sequences and questions based on BNCC/existing educational content, interpret text/images and support reading-fluency and English assessments.
- Architecture and production operations in Docker-based environments, including optimized images/builds and deployments; structured summarized data for dashboards/reports, load testing, caching, queues, availability and load balancing for high-scale scenarios.
- Quality strategy with Jest and Playwright integrated into CI pipelines, including pre-merge validation; code review, mentoring, technical support for POCs/public-sector bids and responsibility for mobile publishing and maintenance.

MID-LEVEL FULL STACK & MOBILE DEVELOPER | AMPLIMED | 2024 - 2025

Stack: React, React Native, Node.js, PHP/Laravel/Blade, JavaScript/TypeScript, Java/Swift, Twilio, Docker/Dev Containers, Kubernetes, Jest and REST APIs.

- Developed and refactored React web interfaces for marketplace, scheduling, telemedicine and care portals, integrated with PHP/Laravel/Blade backends, Node.js services and legacy PHP/vanilla JavaScript components.
- Developed and maintained React Native applications, using Java and Swift for specific native requirements, integrating APIs and participating in the complete build, testing, distribution and app-store publishing lifecycle.
- Worked on web/mobile telemedicine with Twilio and patient queues: ordering, priority, triage, reassignment between professionals, care continuation and integration with the clinical system for records and prescriptions.
- Worked extensively in containerized environments with Docker and Dev Containers, from single-container projects to multi-service compositions; configured environments/.env files and supported deployments on Kubernetes-orchestrated infrastructure.
- Developed microservices, unit tests with Jest and white-label structures; impact: solution adopted by dozens of customers and commercial targets planned for six months reached in approximately one quarter.

TECH LEAD | ASTRONFY | 2023 - 2024

Stack: PHP/Laravel, Blade/Livewire, Angular, Node.js/Next.js, TypeScript/JavaScript, Python, MariaDB, AWS/Azure, VPS, GitHub and payment integrations.

- Technical ownership and hands-on development of marketplace, affiliate dashboard, support tools and web/mobile applications in a modular white-label architecture, with extensive use of PHP/Laravel, Blade/Livewire and MariaDB.
- Built and evolved responsive, performance-focused frontends, Angular micro-frontends and Node.js/Next.js/TypeScript/JavaScript projects and websites, balancing interface performance with backend and integration requirements.
- Technical management of multiple servers/VPS environments, GitHub-triggered deployments, backups, security and availability, alongside AWS/Azure usage; developed Python automation for data processing, scraping and operational routines.
- Integrated domestic, international and cryptocurrency payment methods, worked with SEO/Google Analytics and provided direct technical support to customers and partners across Europe and Asia; marketplace operating in 10+ countries and processing thousands of transactions per month.

FULL STACK & MOBILE DEVELOPER | INFOGEN SISTEMAS | 2022 - 2023

Stack: GeneXus 9/10, C#/.NET Framework 4.x and .NET Core, ASP.NET, Vue.js, Java/Android, Flutter, React Native/Expo, Python, SQL Server/MySQL/Oracle, Firebase, IIS and Jenkins.

- Progressed from Trainee to Junior and Mid-level Developer, starting on the GeneXus 9/10 ERP/portal, with multiple modules and versions maintained in parallel and integrated with large SQL Server databases using stored procedures, triggers and update routines.
- Expanded into C#/.NET Framework 4.x and .NET Core development for portals, web apps, APIs and services, including legacy systems and new projects, Vue.js components, integrations, IIS and versioning/deployment processes with Jenkins.
- Worked across three generations of the mobile stack: native Java/Android, Flutter and later React Native/Expo, building and modernizing applications, integrating APIs, reports/charts, push notifications, development builds and the complete testing and app-store publishing lifecycle.
- Implemented automatic offline synchronization for CRM, sales-order, WMS and milk-collection apps, with connectivity detection, recovery after failures, duplicate prevention and data-integrity safeguards.
- Built small Python scripts and automation for file/flow monitoring, triggering notifications/processes and scraping external sources; worked within an ecosystem of 20+ applications, refactored 8+ apps, created 15+ white-label modules and mentored/onboarded developers.

FULL STACK & MOBILE DEVELOPER | FREELANCE & INDEPENDENT PROJECTS | 2018 - Present

Stack: React/Next.js, React Native, Node.js, Vue/Angular, C#/.NET, PHP/Laravel/Blade/Livewire, Java/Spring Boot, Flutter, Swift/Objective-C, Python, SQL/NoSQL, Firebase, Vercel/Neon, Docker and VPS.

- Development and consulting across web/mobile products, APIs, dashboards, internal systems and integrations, using different stacks according to project context: React/Next.js, React Native, Node.js, Vue, Angular, C#/.NET, PHP/Laravel/Blade/Livewire, Java/Spring Boot, Flutter, Swift and Objective-C.
- End-to-end work on projects using Vercel/Neon, Firebase, Docker and VPS infrastructure (Hostinger, DigitalOcean and Vultr), Git/GitHub/Git LFS workflows and selected AWS services, covering architecture, development, deployment, maintenance and continuous evolution.
- Recent projects include a production property-inspection application for the real-estate sector, an international sports-training mobile app with in-app purchases and an independent platform for contextualizing news and public data; I also build websites and tailored solutions for professionals and small businesses.
- Used Python for data analysis, machine learning, model training/evaluation, automation and data visualization; additional experience with 2D/3D games/experiences and specialized web/mobile integrations.
- Impact: customers and partners in 4+ countries, participation in an international sports project and a product showcased at an international trade fair in Germany, in addition to consulting and ongoing work on legacy systems.

EDUCATION & LANGUAGES

Bachelor's Degree in Information Systems - Cruzeiro do Sul Virtual | In progress | Expected graduation: 2027

Languages: Portuguese native | English advanced / professional working proficiency
